

CATCHING PLASTIC INITIATIVE - Fishermen united with Corsair for cleaner Oceans.

Transcript

How you doing guys? We have a very, very special announcement to be made for you today.

As we all know, plastic waste is a major problem on land, but even more than that, it is a problem in our oceans and in our rivers.

We are here today to announce a partnership.

A collaboration, but even more than that, a whole new initiative.

Where Corsair crew will now begin to work together with fishery associations all over the country of Thailand, including thousands and thousands of fishing boats.

And 10's and 10s of thousands of fishermen.

What will happen now is that these fishermen will go out to the ocean?

Not only are they now catching fish.

Also now begin to catch last.

This plastic is then brought back into the door from where it will be handed over to Corsair, true, where we will take that plastic into our tanker production facility to be recycled into advanced bio oil.

And it is our absolute pleasure to launch this collaboration today here in the fishery capital of Thailand.

The summits are called where we are joined together with the chairman of the Samut Sakon Fishery Association, Mr **** Kong.

And we are extremely delighted and extremely happy for this partnership. And I would like to thank you one more time for us to launching this partnership together.

Thank you very much.
